At its annual user conference, the User Group on Autodesk in New York City, New York, the company announced new releases in 2016. The latest AutoCAD was version 2017, and the company also released a new version of AutoCAD LT. AutoCAD's user base grew by 50% from 2016 to 2017. The company reported about 7 million total users in November, 2016, an increase of 1.5 million users since January, 2016. AutoCAD 2017 features Autodesk introduced AutoCAD 2017 at its user conference. The software has new features and improvements. The Release notes of AutoCAD 2017 state that the newest release represents the "best" version of the software available at the time of writing. New interface AutoCAD is available as a browser-based, user-friendly interface, which is called AutoCAD Web App. It can also be used as a desktop client, that is, a desktop version of AutoCAD is installed on the user's computer and is used like any other application, including traditional AutoCAD. The new interface is relatively similar to the old version, but much faster, better looking and easier to use. The browser-based version of the software has a set of pre-selected templates and viewing tools. The templates include different shapes and patterns, and the user can import and work with these. Some of the available drawing objects are curved lines, arcs, circles, ellipses, polygons, Bézier curves, splines, text and arrows. The viewing tools include edit commands, dynamic views, view scales, and a drawing workspace (a grid). Along with the new interface, the software also has a new version of HMI (Human Machine Interface). The interface is integrated into the user interface (UI), and is better than the previous version. HMI is now available in English, German, Spanish, Italian, French, and Japanese. It is also available as an iOS and Android app. The developers of the app have a new UI design and an API (application programming interface) to connect AutoCAD to the user interface on iOS and Android devices. The new app is available for the iPhone and the iPad. A new publishing tool is also available, that is, you can download the entire AutoCAD database, and not only the drawings from the users. AutoCAD 2017 has significantly improved the modeling capabilities, and it has a new Layout and Dimensioning

Q: springMVC-data-jpa deleting items I'm implementing an autocomplete feature in a springMVC webapp. I have the following situation: Autocomplete takes information from the database. I have an entity with a many-to-many relation. I have a controller that has an action that takes this entity, deletes it from the database and returns a list of items where I can edit the items. I have made the following: Controller @RequestMapping(value = "/lista") public @ResponseBody List lista(@RequestParam("q") String text, @RequestParam(value="page", defaultValue="1") Integer page, ModelMap model) { List lista = listaService.findByNome(text); model.addAttribute("lista", lista); return lista; } Controller method List lista = listaService.findByNome(text); entityManager.remove(lista); return new ModelAndView("lista", "lista", lista); So, the action is removed from the database and the lista object is passed as lista attribute to the view. My problem is that I can only see the first item in the list, because after that springMVC-data-jpa retrieves a new lista object for each item that I delete. I don't know why this happens. I have noticed that I can only delete the last record. Is there any way to avoid this behavior? I've thought in setting a condition on the entity to prevent its deletion if some condition is true, but I can't understand how to implement it. I would like to keep the autocomplete without saving new records for each input. A: Do not delete an object from the database unless you are absolutely sure you want to. If you're sure

Create nested tracks in your drawings and easily switch from one branch to another. Use the updated Drawings panel, which lets you easily organize multiple tracks and branches. (video: 2:27 min.) Sketch panel: Create and easily export and import complex drawings from pen and paper in just a few clicks. (video: 1:18 min.) Save your drawings, including an external data file, to Office 365 and automatically receive push notifications when someone updates your drawing. Dynamic block insertion: Quickly and easily insert pre-defined blocks and meshes directly into your designs. The best way to create pre-defined geometric figures, based on preset guidelines and operations. (video: 2:12 min.) Out of the box: Layers: Create your own layers and easily assign attributes to your drawing. Easily add, edit, and delete your own layers, including independent blend settings for each of them. (video: 3:15 min.) Drawing tools: Easily mark drawing objects and symbols for faster and more efficient design. Easily edit marks and other drawing objects, including the text, size, and color of those objects. (video: 1:12 min.) Design data: Streamline and automate your design workflow by accessing data stored in your design. Allocate shared data, including dimensions, text, symbols, and colors, to shared blocks or meshes. (video: 3:32 min.) Automatic dimension placement: Easily place dimensions and scale automatically using your drawing's coordinates or map-based distance. Specify that a dimension should be placed to a reference point based on a value from the drawing or map. (video: 1:27 min.) Support for drawings on paper: With AutoCAD paper, easily turn paper into blocks or surfaces, and import and export drawings from paper.
