Web Services — automatically build software applications that work with AutoCAD as if it were a regular application. AutoCAD Web Services provide a set of SOAP-based web services that can be used from any web browser. Authoring and publishing With the shift of AutoCAD from local user to web-based, authors are able to create drawings locally in AutoCAD, and then publish the drawings to the Autodesk exchange store. This allows AutoCAD to move away from the dependency on local files. The process for publishing an Autodesk Exchange Drawing begins with an author creating a drawing in AutoCAD. After the author saves the drawing, the drawing is published to the exchange store. This process has many benefits to authors, including the ability to create a drawing, save it locally, then immediately publish it to the exchange store to have it available in the cloud. A number of third-party products and services cater to Autodesk exchange publishing.
