AutoCAD History AutoCAD is based on an earlier Autodesk product, ARCAD (Automatic CAD), which was written and developed by the University of Toronto researchers. ARCAD was in development from 1980 to 1981, and was finally released in 1981 as Autodesk R17. AutoCAD History: Origin of the Name and Applications AutoCAD history begins with a short-lived application called ARCAD, which was developed in the early 1980s by the University of Toronto researchers. ARCAD was initially developed to facilitate the drafting and design of structures, especially ship hulls. ARCAD was installed on microcomputers like the DEC PDP-8 series. But it was never commercially released. Instead, the university developed CAD-DRAW for the Apple II computers and released it for the public. Later, the university used CAD-DRAW as the basis for the more stable and commercial AutoCAD, which was released in 1982. The name "AutoCAD" was chosen to suggest the concept of "Automatic CAD." In other words, to make CAD much easier for users to perform. AutoCAD vs. Other CAD Software AutoCAD was developed to provide CAD users with a CAD program that worked on a desktop personal computer. Today, most CAD programs run on mainframe computers or minicomputers, with each CAD user (user) working at a separate graphics terminal. In the past, CAD users used programs like AutoCAD on microcomputers with internal graphics controllers. The main advantage of desktop AutoCAD, compared to CAD programs on mainframe computers or minicomputers, is that a single desktop AutoCAD PC can be used by multiple users at the same time. It is also easier to install and easier to maintain. In addition, since the AutoCAD program runs in a window on the computer desktop, it has a very "windows-like" look and feel. Unlike mainframe-based CAD programs, which typically run on terminals that look like bulky, industrial-strength calculators, desktop AutoCAD programs look more like any other computer programs on your desktop computer. To support the transition from the

History AutoCAD was originally called CADDY. In a 1985 interview with an IBM executive, Ken Bowler, co-founder of American Graphical System (AGS), stated that,

"AutoCAD is the CADDY software we're working on today. It's going to be a powerful tool to create very accurate, precise drawings." The CADDY word was eventually changed to AutoCAD by Autodesk, due to an error by a user submitting the CADDY word as a "business name" to the U.S. Patent and Trademark Office. AutoCAD started out with only 2D drafting features in 1986. Initially, AutoCAD offered drafting capabilities in the 2D, 3D, and BIM space. In the early 1990s, 2D drafting features were expanded to include 2D-manipulation features and 2D-positioning features. 3D features were introduced in the mid-1990s. In the late 1990s, in addition to 3D drafting and 2D-manipulation, the AutoCAD family of applications included Civil 3D, Alias|Wavefront, and Autodesk Inventor, a 3D parametric modeling tool. These later were all to be replaced by a new 3D feature in AutoCAD called "Link". The Link feature in AutoCAD became the core of the AutoCAD product line and is now used in AutoCAD 2019 and later. In 1998, Autodesk merged with another software company, DAI Systems, which was developing AutoCAD DWG/DXF. It was the first integration of "AutoCAD Technology" and "DAI Technology" creating AutoCAD DWG/DXF. In 2002, Autodesk acquired desktop publishing software company, d-flow, which contributed AutoLISP to AutoCAD. The CADDY name was retired from the product line when the product name was changed to AutoCAD. AutoCAD's first version supporting a single dynamic link library (DLL) was AutoCAD 2007. It also added an e-mail application, called AutoCAD Link. This new application was based on the Java platform, but was included in AutoCAD as a separate application. AutoCAD 2018 was the first version with an AutoLISP engine. AutoCAD 2019 was the first AutoCAD release to
