Besides that, the tool is also very good for all those who are using the router. The PC with this gadget installed can log on the router and change all the settings remotely. The gadget runs silently on the computer, and can be removed, replaced and installed in seconds. Note: The Windows firewall can cause some problems as well as cause it to not function. Please turn it off to allow the program to properly function. Windows 7 users please note that this tool does not appear as advertised. It does work, but requires the use of the "Network Link Share Connected" option in the control panel. If you do not need this option, you can disable it. Like it? Share with your friends!
